

Garden Committee Report (2016-2017)

Field Based Educational Trips

Sensitization programmes were initiated for students through educational field visits. Student's awareness campaigns were conducted on biodiversity conservation, understanding sustainable use of energy (solar energy) and gardening techniques through field-based engagements.

An educational trip to garden of five senses was organized for Environmental Science students.

Plantation Drive

A plantation drive was organised with students and teachers of garden committee in the campus. As part of the drive, the Garden committee members purchased various potted plants from various nurseries for maintaining the greenery in the campus. The plants were maintained on a regular basis by the college gardener under the guidance of the committee.

Solid waste management

To manage the garden waste, two pits were prepared behind the old coca cola kiosk. Only the sides were cemented. The gardener was asked to put all the garden waste in one of the pits. Once the pit got filled, it was covered with an iron mesh. The second pit was used. The committee decided to segregate the solid waste from the college canteen kitchen. The canteen person was therefore asked to segregate the waste and to put only dry waste into the pits.
