Polycystic ovary syndrome risk: efficacy of self-assessment test

Jyoti Taneja, Taruna Arora, Anju Jain, Chandra Mansukhani, Latika Bhalla, Sarita Nanda

Abstract

Background: Polycystic ovary syndrome (PCOS) is a growing morbidity in young women globally. This disease has an association with several exogenous factors like irregularity of menses, hirsutism and obesity. Very few standardized self-assessment tools based on easily observable factors are available for use in the Indian population, which can help them to assess their PCOS risk accurately.

Methods: Undergraduate women of the age group 18-22 years enrolled in a university campus participated in the survey questionnaire. Nineteen questions with binary answers as "yes" or "no" were used for self-assessment test. Each "yes" was scored as one mark, and each "no" scored as zero, leading to the maximum score of 19. Scores of the women with irregular menses (test group) were compared to those of regular menses (control group). Welch's corrected t-test was used to calculate the significance at 5% between the groups. The clinical assessment confirmed the presence

ABSTRACT: Wound is an inescapable event in life. Wound management is ongoing treatment of a wound by providing appropriate environment for healing. This environment is provided through a wound healing bandage that helps accelerate healing of wound. A variety of wound types has resulted in a wide range of wound dressings with new products frequently introduced. Humans have frequently used plants and natural elements to treat common infectious diseases. Some of these traditional medicines are still part of the habitual treatment as they not only serve merely as a treatment, it is a way of life which has no side effects, gives disease free long life, relaxes mind, makes you tension free while keeping good health status. Research on wound healing drugs/agents from natural resources is a developing area in modern biomedical sciences. Herbal, natural products symbolize safety in contrast to the synthetic products that are regarded as unsafe to both humans and environment. Herbal products have fewer side effects as compared to synthetic, so they are widely used for medicinal purpose. The study is designed to develop a nature based wound healing bandage that helps accelerate wound healing process and has a soothing effect on skin.

Key words: Wound, wound management, wound dressing, infectious disease, drugs.

The screenshot shows the article page for 'Play in Early Childhood Education Centres of India: A Review Article' by Monica Jairam and Geeta Chopra. The journal is the International Journal of Applied Social Science, Volume 6 (9), September (2019) : 2243-2250. The article is a review article with ISSN 2394-1405 and DOI 10.36537/IJASS.6.82243-2250. The abstract states: 'Play is the very characteristic of early childhood years. During early childhood years, children involve in various forms of play which is imperative for the optimal development of children. Play enhances healthy brain development; strengthen emotional, social and physical skills. It provides opportunities to explore world, make relationships, enhance creativity and develop early literacy skills. During these early childhood years in 2018, 66.7% of Indian children were enrolled in early childhood education centres. Hence, it became significant to explore the kinds of opportunities which are given to children in Indian early childhood education centres. Through the process of exclusion and inclusion criteria fifteen empirical studies on "play" amongst children in India were selected. The article concludes the status of play in twelve states of India. Within these twelve states availability of play opportunity, play materials and playing spaces of one thousand three hundred and twenty eight early childhood education centres have been stated. Children displayed various forms of play behaviours influenced by one's age, culture and socio economics status. Centres do provide opportunities for free play, supervised play, outdoor play and play to enhance early literacy skills. Playing materials and spaces available varies from centre to centre.' Assessment of life style pattern, nutritional status and morbidity profile of adults practicing yoga
Author(s): Pooja and K Geeta

Abstract: Yoga is an ancient Indian science which gives more emphasis on good life style and dietary practices. The present study aimed to assess the dietary and lifestyle pattern, morbidity profile and nutritional status of the adult yoga practitioner (Yp). A total of 100 yoga practitioners of 35-45 years of age were selected. Questionnaire cum interview schedule was used to collect information and dietary intake data was gathered.

ABSTRACT
Aim: To compare the consumption of ultra-processed foods among working and non-working adults.
Methodology: A total of 100 adults (50 working and 50 non-working), males and females aged between 21 - 40 years were enrolled for the study. A detailed questionnaire was developed specifically for this study and data was gathered regarding general information frequency of consumption of ultra-processed foods, cooking practices, buying practices etc.
Results and conclusion: Data revealed the consumption of UPF was higher among the working adults in comparison to the non-working adults. The main reasons reported to buy these products were ease to prepare them with reduced effort and less time in preparation among the working adults; better taste and influence of media and advertisements among the non-working adults.

INTRODUCTION
Ultra-processed foods are formulations of ingredients, mostly of exclusive industrial use, that result from a series of industrial processes (hence 'ultra-processed'), first classified according to their degree of processing in 2010 using the NOVA system, updated in 2018 (1). During the past two decades, availability and consumption of ultra-processed foods, characterised by food products with a low nutritional quality and high energy density, has increased markedly in many countries (2,3). Between 1990 and 2010 the consumption of ultra-processed foods almost tripled (from 11% to 32% of daily energy intake) (4) parallel with increase in added sugar content. These are industrial formulations made mostly or entirely from substances derived from foods and additives, with little, if any, intact food (5). These food products are convenient (durable, ready to eat or heatable), longer-shelfable (extremely

21-40 years. A detailed information sheet was formulated and given to the subjects providing information regarding the purpose and procedure to be followed during the study. Further, consent of the subjects was taken using a consent form before recruiting them for the present study.

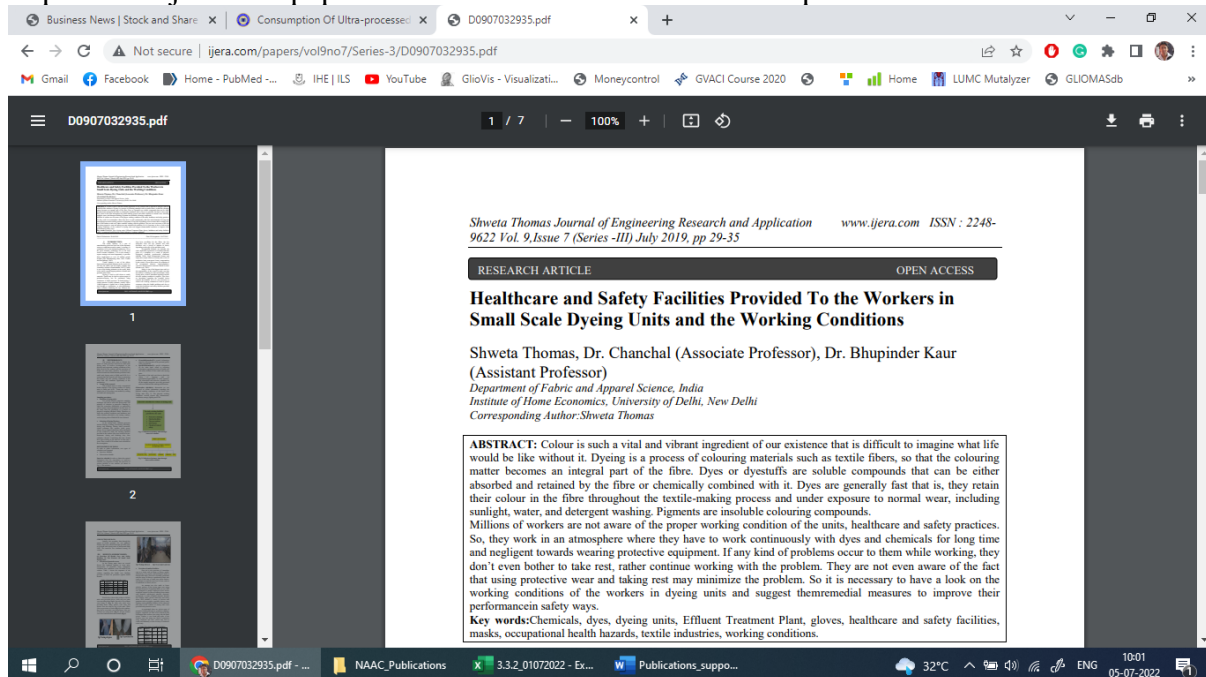

METHODS
A suitable questionnaire was designed to determine the extent of awareness, usage and consumption pattern of ultra-processed foods. It included questions on the general profile of the subjects, family profile, eating pattern of the respondents, frequency of consumption of ultra-processed foods, cooking practices, buying practices etc. The questionnaire were pretested on the 5 subjects randomly who were not included in the study and based on their responses the questionnaire were suitably modified. The questionnaire

Inclusive education

Having children with disabilities in the school settings with reasonable accommodations. But is it all? Is inclusion really happening?

If you really want to include me....

Just hear me out what I have to say!!!! My "VOICE" matters.... Physically am included, but not socially.

What voices portray?

Peer interactions valued by children with disabilities, but bullying reported.

Supportive role of teacher and teacher aides is valued, but over indulgence of their role is seen as causing discrimination.

Online published on 30 March, 2019.

Abstract

Women are very closely associated with water since it is at the core of their traditional household responsibilities. Studies conducted across developing countries have shown that water collection still remains a highly gendered task. Provision of safe water for the household is one of the Practical Gender Needs (PGNs) of women, which in turn is crucial to enable them to meet their Strategic Gender Needs (SGNs) such as education, and control over resources. While the requirements of water are continuously increasing due to demographic, socioeconomic and technological changes, the availability of water faces a serious threat from human induced climate change. If the gender-based inequalities and inequities in society have to be reduced, it is very important to invest in water supply and sanitation related infrastructure at the household level. Besides improving their quality of life, such investment will enhance women's adaptive capacity to face climatic stresses and extremes.

Food Hygiene and Safety Knowledge of Managers in Catering Sector

Yadav Heena*, Mahna Ranjana and Rekhi Tejmeet K.

Department of Food and Nutrition, Institute of Home Economics, University of Delhi, Delhi, India.
Email: heenayadav88@gmail.com

ABSTRACT

Food hygiene and food safety practices integral part of food industry particularly in catering sector as food served must be tasty as well as safe for the consumers. This has a major impact on the public image of these organizations. In India, Food Safety standards are laid by FSSAI to ensure sound implementation of food hygiene and safety practices by the food handlers at all steps of the food production cycle. It is crucial for managerial level employees such as Head Chefs, Restaurant Managers, etc. in catering sectors to understand these concepts thoroughly for their implementation by food handlers. The present study thus focused on studying the food hygiene and safety knowledge of managerial level employees in various catering establishments across Delhi. The study was conducted at 44 restaurants (14 QSRs and 30 FSRs). The results indicated that majority of the managers were aware of food safety practices.

Abstract
Acute Herpes Zoster (AHZ) occurs due to reactivation of dormant Varicella zoster virus within neurons. It is more common in the elderly diabetics and immuno-compromised patients. Such patients are more likely to develop debilitating neuropathic pain known as post herpetic neuralgia (PHN). Various researchers suggest that early antiviral treatment can prevent development of PHN and reduce its severity when it does occur. A retrospective study on 45 patients of herpes zoster ophthalmicus treated with oral acyclovir of different strengths with or without systemic steroid were evaluated for post herpetic neuralgia at repeated intervals for one Year in herpes zoster ophthalmicus cases. Our study suggests that a combination of antiviral drugs and steroid may have the best results in the management of PHN.

Keywords: Herpes zoster ophthalmicus, Post herpetic neuralgia, Painscore, Treatment.

Introduction
Herpes zoster presents as a rash of 2-3 weeks duration in immunocompromised patients that is accompanied by moderate to severe pain.¹ Herpes zoster ophthalmicus occurs when reactivation of the latent virus in the trigeminal ganglia involves the ophthalmic division of the nerve. Herpes zoster affects the trigeminal ganglion in 10-15 percent of patients with ophthalmic division involvement in 89% of these patients.^{2,3} The virus damages the eye and surrounding structures by secondary perineural and intraneural (patients over 50 years old with severe acute pain, severe rash, or significant prodromal symptoms). Despite the combined use of tricyclic antidepressants, anticonvulsants (gabapentin and pregabalin), antiviral drugs and analgesics, PHN is often refractory to pharmacological treatment and prevention strategies.^{4,5}

Aim of Study: To compare the effect of acyclovir, steroids and combination therapy in the pain management of post herpetic zoster neuralgia.

Abstract:
Concern for the health-related physical fitness of college going students has recently increased because of the current obesity epidemic. Therefore, the study designed to assess pre and post exposure height, weight, BMI (anthropometric) and flexibility (motor performance) characteristics among college going girls. An intervention package comprising sessions on physical education and physical activity was designed for the study participants. Participants were undergraduate college going girls (N=60).

 - Abstract: Film analysis is the process in which film is analyzed to gain a deeper understanding. A film incorporates audio-visual elements and therefore introduces a new dimension to analyse – the analysis of visual elements. This paper presents a case of an Indian Bollywood film, *Margarita with a Straw* (2014). The film involves a unique plot where the protagonist is a woman with disability. It is a story of her exhilarating journey of self-discovery, a transition from a dependent young woman to a person complete in her own way. In this paper, narrative structure analysis of the film is undertaken to understand layers in meanings of the story elements, including plot structure, character motivations, and theme. It is through this story, that the audience gets a peek into what it means to live with a disability, and how similar are the needs and emotions of the 'able bodied' and the persons with disability. It throws open various myths and stereotypes existing in the society especially towards disabled persons. It gives new meanings to the process of self-discovery and finds relevance and resonance to the free spirits of youth.

ABSTRACT

Fashion conscious consumers demand updated and up style look for themselves. They not only look at the functions of the product but also the aesthetics according to the current fashion. They are now more conscious of what they buy, about the style, visual appearance, etc. The use of faux leather instead of natural leather can cater the demand of fashion products as well as will also take care of the environmental, economic and religious concerns of the consumers. This research is on the utilization of faux leather as the design element for the apparels. Using different techniques, innovative designs collection is developed. Further, the selected techniques have been applied as the surface enhancement on Indo-western outfits.

A comparative study on morphology and dyeing behavior of ahimsa silk and mulberry silk

Divyansha Sharma, Chanchal and Anshu Singh

Abstract
Silk is widely used because of its beauty and acclaimed as the queen of textiles. Traditionally silkworms or silk-producing moths are killed during the collection of their silk cocoons. To eliminate the traditional process, there are few researchers who have developed a new technique for producing silk. The silk spun from Mulberry pierced cocoon without killing pupae for silk extraction considered as "Ahimsa silk" or is also called as "Peace silk". Ahimsa silk is widely accepted by Hindus, Jain community, yoga and environmentalists who strongly believed in non-violence. The present study was formulated to identify the morphological and dyeing behavior of Ahimsa silk and Mulberry silk. No such significant difference was found in FTIR in both the silk fabric but difference was seen in microscopic view and as well as in dyeing behavior. Ahimsa Silk showed better result in all the dyeing parameters.

Keywords: Ahimsa silk, mulberry silk, FTIR, k/s value, microscopic view

Assessment of bio-degradability of bio-synthetic fabrics

Divyansha Sharma, Chanchal and Amita Walia

Abstract
Sustainability, industrial ecology, eco-efficiency, and green chemistry are guiding the development of the next generation of materials, products, and processes. With advancement of science & technology, products beyond our present perception can be produced. In the concerned paper innovations in fibers being called as bio-degradable has been discovered. Five different bio-synthetic fabrics were assessed for their bio-degradable properties. Soil burial test and anti-microbial colony reduction test were performed. All the fabrics showed the bio-degradable properties which supports that the bio-fibers are environmental friendly fibers so it has been more demand in future. The development of special fibers is the consequence of merging fundamentals scientific and technical knowledge, as there is a quest for high performance fibres.

Keywords: Bio-synthetic, sustainable, bio-degradation, soil burial, anti-microbial

Socio-Psychological Factors Affecting Clothing Preferences : A Review

<http://scientificresearchjournal.com/wp-content/plugins/download-attachments/includes/download.php?id=2938>

The screenshot shows a PDF document titled "Socio-psychological factors affecting clothing preferences : A review". The document is from the "International Journal of Applied Home Science", Volume 5 (3), March (2018), pages 690-706. The authors are Garisha Arora^{1*} and Jyoti Aggarwal², from the Department of Fabric and Apparel Science, Institute of Home Economics, University of Delhi, Delhi (India). The document is a review paper with an ISSN of 2394-1413. The abstract states: "Clothes have been identified as fulfilling a vast range of physiological, psychological and our social needs. Individuals prefer different kind of clothes to fulfil all these needs. The paper will highlight and give a brief of all those factors which affect clothing preferences and will proceed by focusing in detail about various researchers view points on the basis of their researches done on following socio-psychological factors namely - a) Cosmopolitanism; b) Self-Esteem; c) Mood; d) Body-consciousness and Appearance. On the basis of reviewed papers, this paper analyses work of previous researcher's work to classify factors influencing clothing preferences. After reviewing, it was found that all the factors whether physiological, psychological and social are multi-dimensional in nature and inter-dependent. It was also found that the new emerging psychological factor in clothing preference is".

Maternal Mortality in India: An Overview of social causes

Kavita Singh, Seema Puri, Geeta Chopra

Abstract: Reducing maternal mortality has been a constant struggle globally. Although developed regions have shown a steep decline in maternal deaths, developing world still continues to contribute inordinately to the total maternal deaths. The Millennium Development Goal (MDG) 'five' focused on reducing maternal mortality and achieving universal access to reproductive health care. In lieu of that, India has made extensive efforts to achieve the same, which are visible through the sharp increase in the rate of institutional births (NFHS 4), but the concurrent high incidences of maternal mortality present a contradictory picture of the nation's progress in improving maternal health.

Eco-friendly technologies of bio-chemical and physical hydrolysis for polyester modification – a comparative study

Environment friendly technologies of biochemical and physical hydrolysis for polyester modification: A comparative study.

- Source: [Man-Made Textiles in India](#), Jan2018, Vol. 46 Issue 1, p10-18. 9p.
- Author(s): Chaudhary, Harshita; Gupta, Charu; Gupta, Deepti
- Abstract: Various chemical, biochemical and physical modification methods have been employed for polyester functionalization to overcome its undesirable properties. Conventional processes used for polyester modification involved use of alkali and amines which used to have an adverse effect on fiber while generating effluent wastewaters. The potential of using green technology in textile industry has now become mandatory. In this study novel and environment friendly technologies of vacuum ultraviolet (VUV) excimer lamp and biocatalysis using lipase Cal A enzyme has been explored. Results of the study show that VUV excimer and enzymes, not only generate polar groups on the fabric surface but also enhance moisture related properties of polyester without affecting strength and feel of the fabric.

BACKGROUND:-

“Today the world focuses on trade in goods but in future the core issue will be how to get skilled people. We need to work in this direction” – Prime Minister of India, Shri Narendra Modi, July 2014.

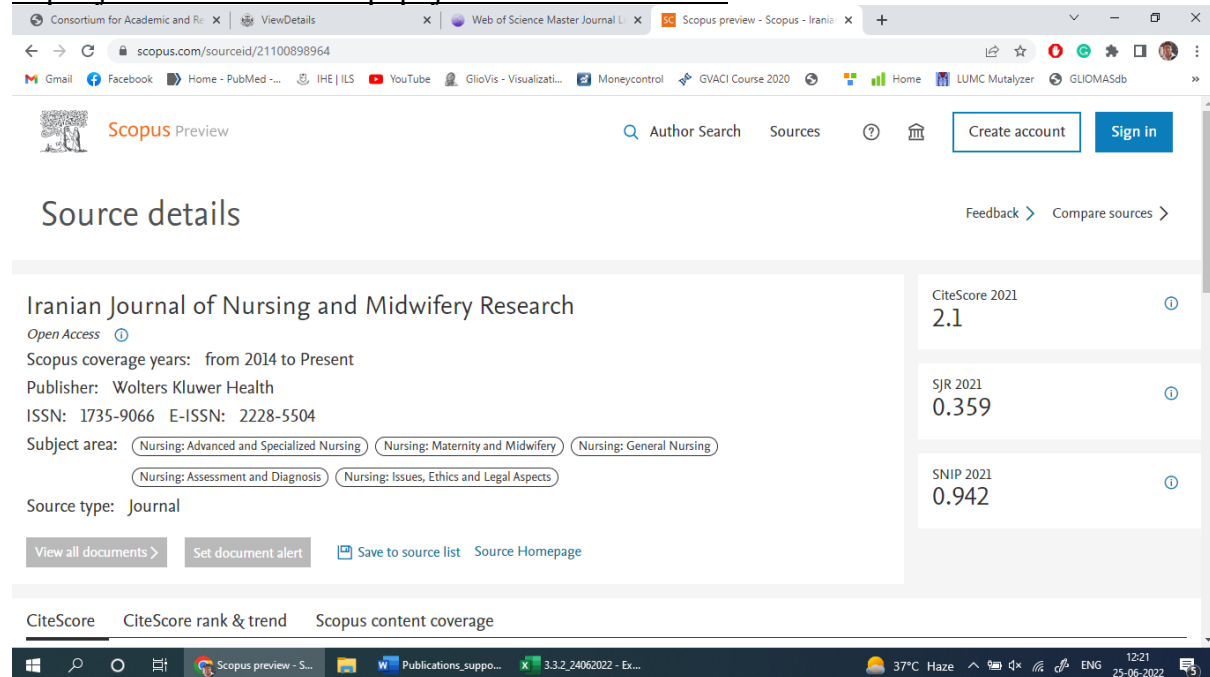

The majority of India’s vast population is of working age. Urgent and effective action to Skill India is needed to capture the demographic potential of India’s youth. Based on data from the 68th Round of NSSO, it is estimated that only 4.69 percent of India’s total workforce has undergone formal skill training, compared with 52 percent in the USA, 68 percent in the UK, 75 percent in Germany, 80 percent in Japan and 96 percent in South Korea.

Abstract

The objective of this review is to study the selected research papers regarding neuro-physiological correlation between yoga, pain and endorphin. Several observational and scientific studies suggest that yoga as a comprehensive exercise programme may modulate pain behaviours. Literature suggests that yoga protects against harmful consequences of stress which is closely linked to pain. Various researchers suggest that the neuro-physiological correlation between yoga, pain and endorphin is closely linked to pain. Various researchers suggest that the neuro-physiological correlation between yoga, pain and endorphin is closely linked to pain.

Exploring the effect of yoga and diet counseling on dietary intake of college-going females

<https://www.kheljournal.com/archives/2017/vol4issue1/PartC/4-1-17-603.pdf>

The screenshot shows a Microsoft Word document titled 'Microsoft Word - 4-1-17-1.doc'. The document is the title page of a research paper. It includes the journal title 'International Journal of Physical Education, Sports and Health', the volume and issue information '2017; 4(1): 155-160', and the article title 'Exploring the effect of yoga and diet counseling on dietary intake of college-going females'. The authors are listed as 'Manjula Suri, Namita Saini and Shipra Gupta'. The abstract is also visible, starting with 'Yoga and diet counseling have long been considered to have beneficial effects on health. The objective of the present study was to examine the short term impact of a brief lifestyle intervention based on the cumulative beneficial effects of yoga and diet counseling on dietary and nutritional parameters, which are important components of health, in 60 young college-going females enrolled at one of the constituent colleges of the University of Delhi. The dietary variables were measured at baseline and at end of the 3-month intervention using a pre-post intervention design. The intake of cereals and millets, pulses, roots and tubers, green leafy vegetables, visible fats and oils, and sugar was significantly lower among the post-intervention group as compared to the pre-intervention group. The intake of vitamin C was above the recommended dietary allowances in the pre-intervention group but got significantly reduced in the post-intervention group. The intake of dietary folate significantly increased in the post-intervention group as compared to the pre-intervention group. Overall, consumption of both food and nutrient intake was not sufficient among the subjects in comparison with the recommendations after the 3-month intervention period. The observations suggest that a short term lifestyle modification based on yoga and diet counseling has a few important beneficial effects on dietary and nutritional parameters in college-going females.'

International Journal of Physical Education, Sports and Health 2017; 4(1): 155-160

Exploring the effect of yoga and diet counseling on dietary intake of college-going females

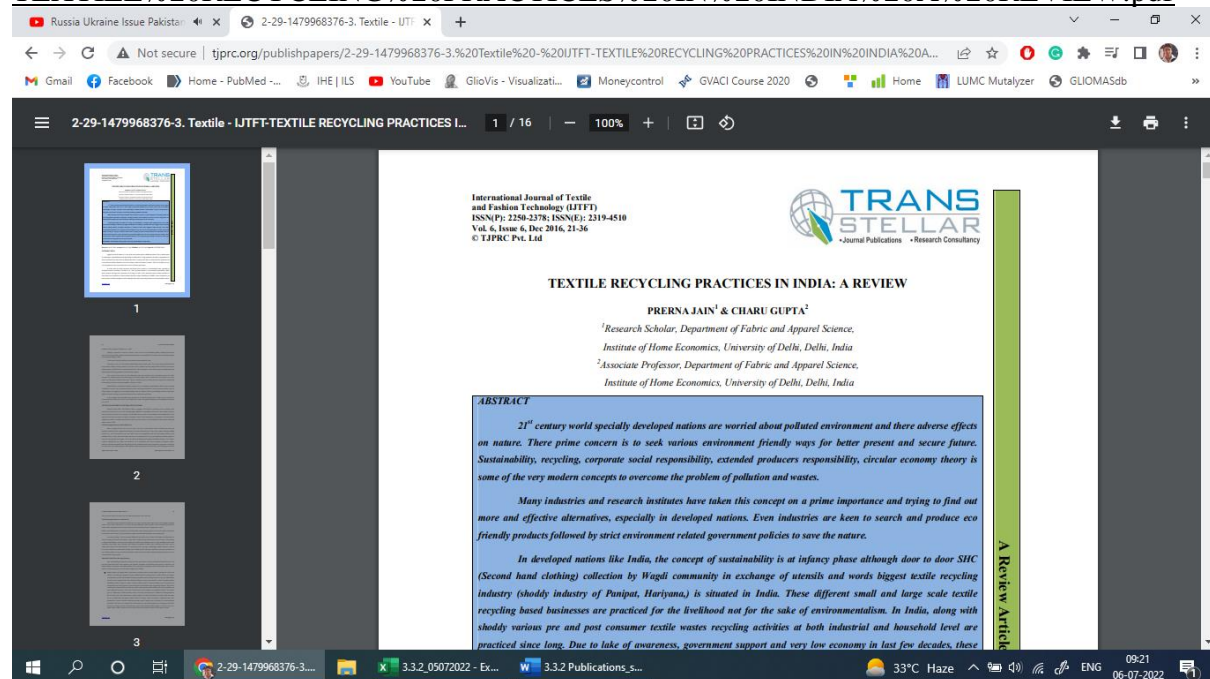

Manjula Suri, Namita Saini and Shipra Gupta

Abstract

Yoga and diet counseling have long been considered to have beneficial effects on health. The objective of the present study was to examine the short term impact of a brief lifestyle intervention based on the cumulative beneficial effects of yoga and diet counseling on dietary and nutritional parameters, which are important components of health, in 60 young college-going females enrolled at one of the constituent colleges of the University of Delhi. The dietary variables were measured at baseline and at end of the 3-month intervention using a pre-post intervention design. The intake of cereals and millets, pulses, roots and tubers, green leafy vegetables, visible fats and oils, and sugar was significantly lower among the post-intervention group as compared to the pre-intervention group. The intake of vitamin C was above the recommended dietary allowances in the pre-intervention group but got significantly reduced in the post-intervention group. The intake of dietary folate significantly increased in the post-intervention group as compared to the pre-intervention group. Overall, consumption of both food and nutrient intake was not sufficient among the subjects in comparison with the recommendations after the 3-month intervention period. The observations suggest that a short term lifestyle modification based on yoga and diet counseling has a few important beneficial effects on dietary and nutritional parameters in college-going females.

Nutritional Contribution of Mid-Day Meal (MDM) as per Quantity norms at Upper Primary Classes in Delhi

<http://www.ijssrp.org/research-paper-1016.php?rp=P585872>

The screenshot shows the IJSRP website interface. At the top, there's a navigation bar with links like Home, Editorial Board, Authors, Call for Papers, Online Publication, Publications, and Contact Us. Below this, the journal's name and ISSN (2250-3153) are displayed. The article title is prominently shown, followed by the author's name. An abstract is provided, detailing the study's purpose, methodology, and findings. The abstract mentions that the Mid-Day Meal Scheme (MDMS) is the largest school feeding programme in India and that the study aimed to evaluate its nutritional contribution. It notes that the data revealed that Aloo Sabji with Poori was the most liked meal (45%), followed by Sambhar Rice (35%), Poori Chole (30%), Khadi Rice (30%), and Rice Chole (29%). The least preferred meal was Halwa with Black Chana (26%). The study also found that the Mid-day meal was found to be a substitute rather than a supplement for the home meal. The energy and protein content of six days menu varied from 350-386 Kcal and 10.9- 11.9 g protein per day which was below the recommended norms of 750 Kcal and 20 g protein. Attempts were made to replicate MDMs recipes at Institute to compute their nutritive contribution. These recipes were modified to include 75g seasonal vegetables (including GLVs), increasing pulses to 30g and also adding 10g soyabean (granules/ flour) to meet suggested protein norm (20g). Cereal amount was kept as 75g as consuming 150g was not possible by the children. Links for 'VIEW FULL PAPER' and 'DOWNLOAD' are provided. Social media sharing icons for Gmail, WhatsApp, Facebook, and Twitter are visible on the right side of the article.

Integration of Technology in Mathematics Education

Ms Alprata Ahuja Department of Education, Shyama Prasad Mukherji College, University of Delhi

Ms Ruchi Mittal Department of Elementary Education, Institute of Home Economics, University of Delhi

ABSTRACT
The present paper focuses on perception of teachers on the use of technology in Mathematics teaching and learning. Mathematics education is one of the domains where one can see prominent and growing effect of technology. It is believed and studied widely that use of technology can have positive effect on Mathematics teaching and learning, yet there seem to be some apprehension on the part of the teachers in the use of technology. This paper has attempted to study perception of teachers in detail on the use of technology in their Mathematics teaching and learning. The perception is studied with respect to the factors - experience of teachers and level of education. The relation between the perception and each factor is studied statistically and inferences are drawn. The sample of given study consisted of the teachers teaching in schools with convenient access to technology.

KEYWORDS Mathematics Education, Technology, Teacher's perception

Introduction:
Technology has infiltrated all the domains of our existence. The rapid changes in technology have also become major part of our classrooms and have leveled an expectation on teachers to not only adapt to these changes but also integrate technological changes in their pedagogy and classrooms. For the teachers to be able to effectively implementing these changes there is an underlying requirement for the teacher to have good hold of technology, pedagogical and content knowledge. TRAP framework in Mathematics classroom. The teachers not only require sound understanding of technology which can be implemented in Mathematics classroom, but also need to have positive attitude towards integrating and using technology in Mathematics classrooms. Research also reveals that before teachers use technology for instruction they must be personally convinced of its benefits and must see the utility of using particular technology (Lam, 2000 as cited in Sugar, Crawley & Fine, 2004, p. 202). The researcher in this article attempts to understand the aforementioned is-

Abstract
This paper attempts to give an overview of the present condition of the sedentary elderly population in India. India's elderly has crossed the 100 million mark during 2011. This age group is found to be leading a physically inactive lifestyle not just in developed countries but developing countries as well. Physical activity was recently considered a cornerstone for combating non-communicable diseases by the UN. The elderly face many barriers for being physically active and therefore, the importance of physical activity must be highlighted to them to encourage them to involve in at least some kind of activity. Studies have been carried out in the West to establish standards for
